

Durham Computer Science: 29% offer rate.

Durham Physics: 70%.

↓ swipe

what families assume:

Same university = same difficulty.

Most families think that if you can get into one course at Durham, your chances are roughly the same for another. The university name feels like the main filter.

↑ *this is a very common mistake*

the reality:

Same uni. Completely different odds.

↑ *same campus, 2.5x the chance*

what this means:

Same campus. Different competition.

Both courses are at the same university, on the same campus, with similar prestige. But the competition levels are completely different. The university name alone tells you nothing about your odds.

↑ *the subject matters more than the uni*

what to do:

The data says Physics gives much better odds at Durham.

If you love both subjects, the data says Physics gives much better odds at Durham. Compare offer rates by course, not just by university.

always check offer rates per course
